

You can configure the VPN settings in Mac OS 10.9 by following these step-by-step instructions.

Step 1

Figure: OSX 10.9 Menu Bar Apple

Click the "Apple" icon on the far left-hand side of the menu bar at the top of the screen.

Step 2

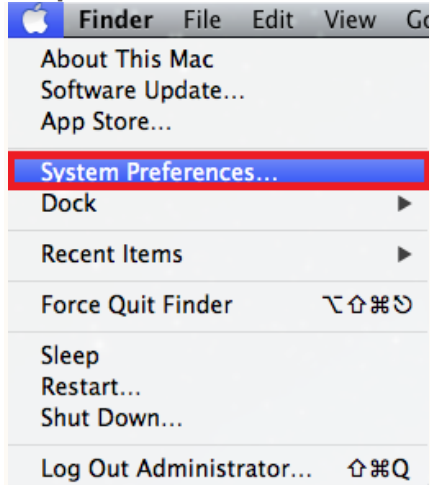

Figure: Select System Preferences

In the menu that appears, click "System Preferences."

Step 3

Figure: System Preferences: Network

Under "Internet & Wireless

Step 4

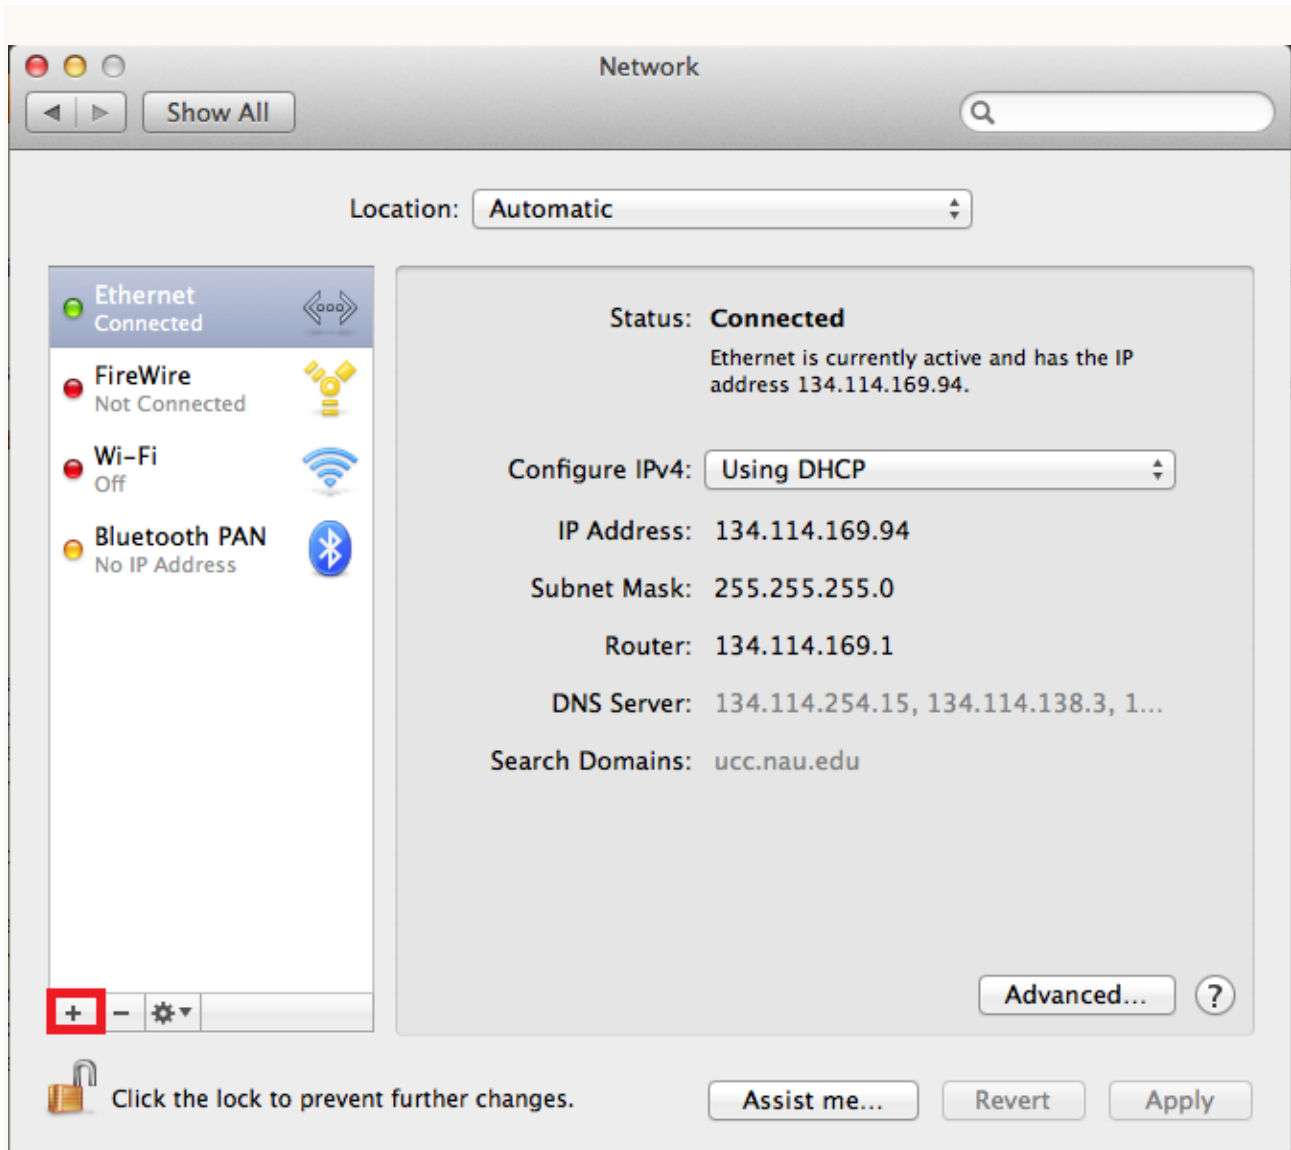

Figure: Add Network

click "Network."

In the "Network" window, click the plus (+) sign at the bottom of the left-hand sidebar to add a network.

Step 5

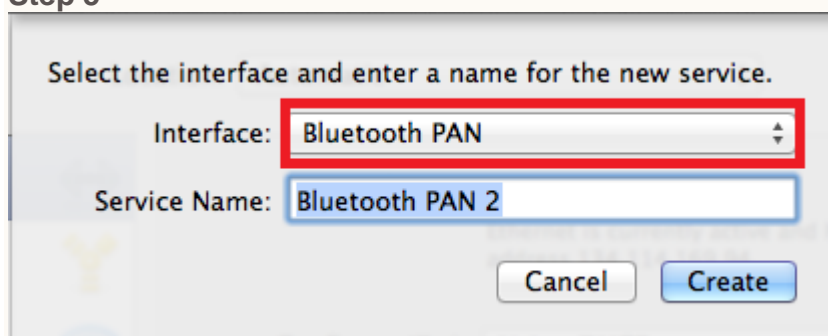

Figure: Interface Dropdown

In the window that appears, click the "Interface" drop down menu.

Step 6

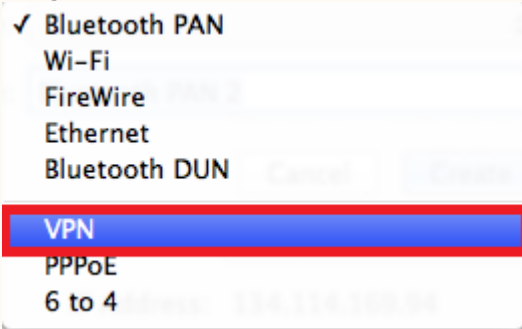

Figure: Select VPN

Click "VPN" in the drop down menu.

Step 7

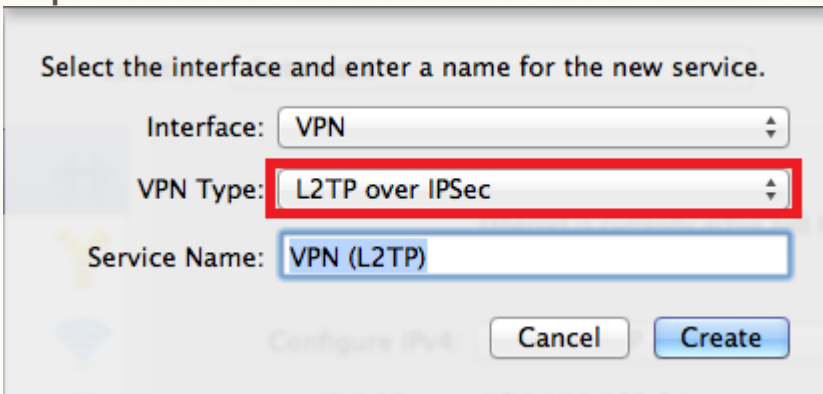

Figure: VPN Type Dropdown

Click the "VPN Type" drop down menu.

Step 8

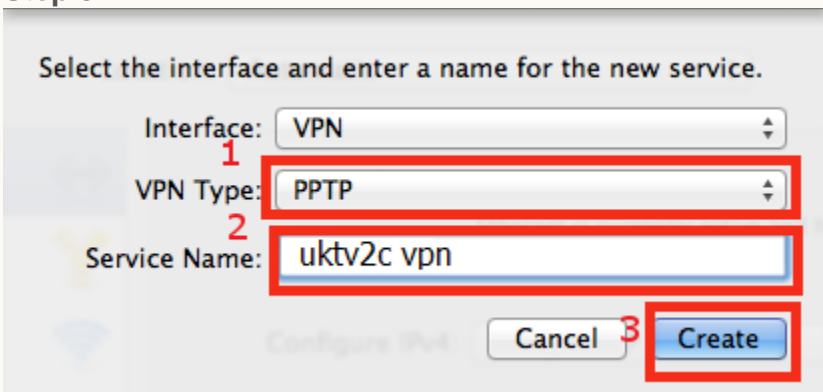

Figure: Network VPN Type and Services

1. In the drop down menu, click "PPTP" as the VPN type.
2. In the "Service Name" field, type "uktv2c vpn" without quotes.
3. When you are finished, click "Create."

Step 9

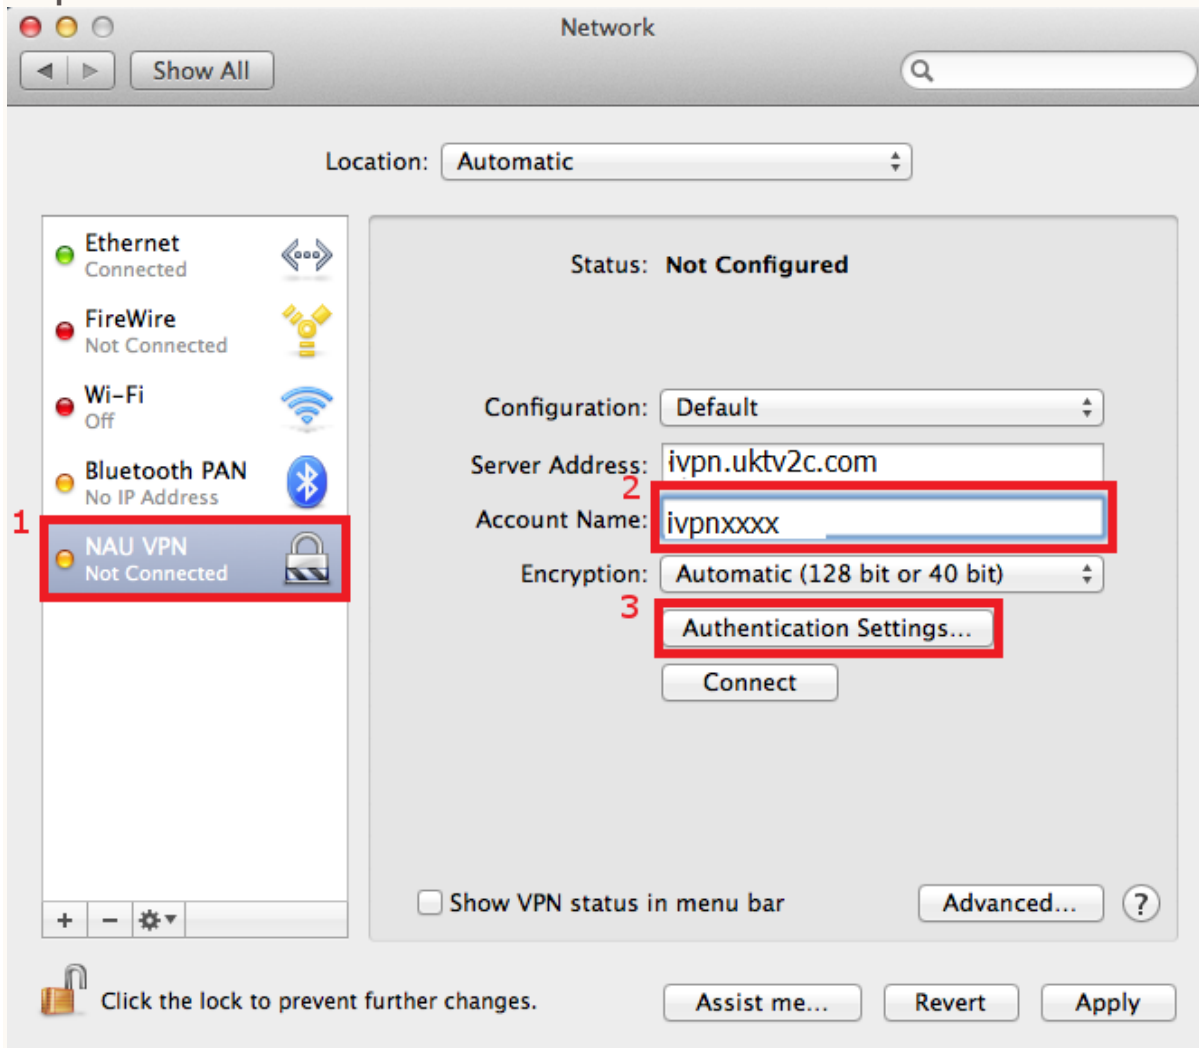

Figure: Network Account Name and Authentication

1. In the "Network" window, click "uktv2c vpn" in the left sidebar.
2. In the "Account Name" field, type "ivpnxxxx" without quotes where "ivpnxxxx" is your ukvt2c ivpn User ID.
3. Once this information is entered, click "Authentication Settings."

Step 10

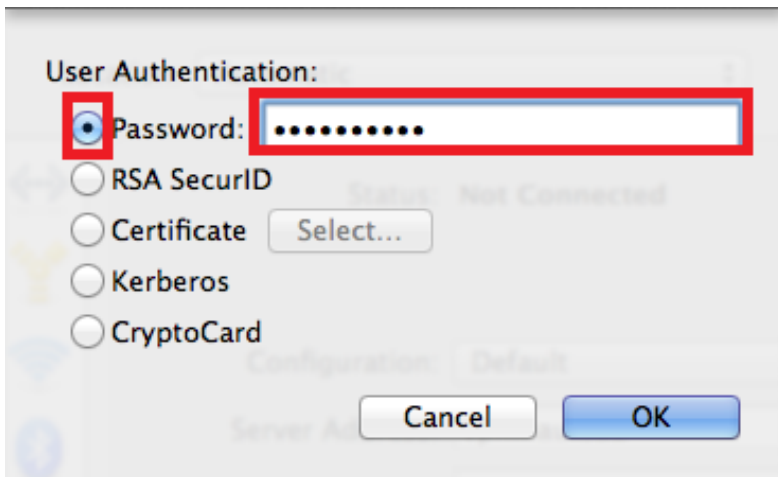

Figure: Enter Password

In the window that appears, click the "Password" option in the list and type your uktv2c ivpn password into the field. When you are finished, click "OK" or press the Enter/Return key.

Step 11

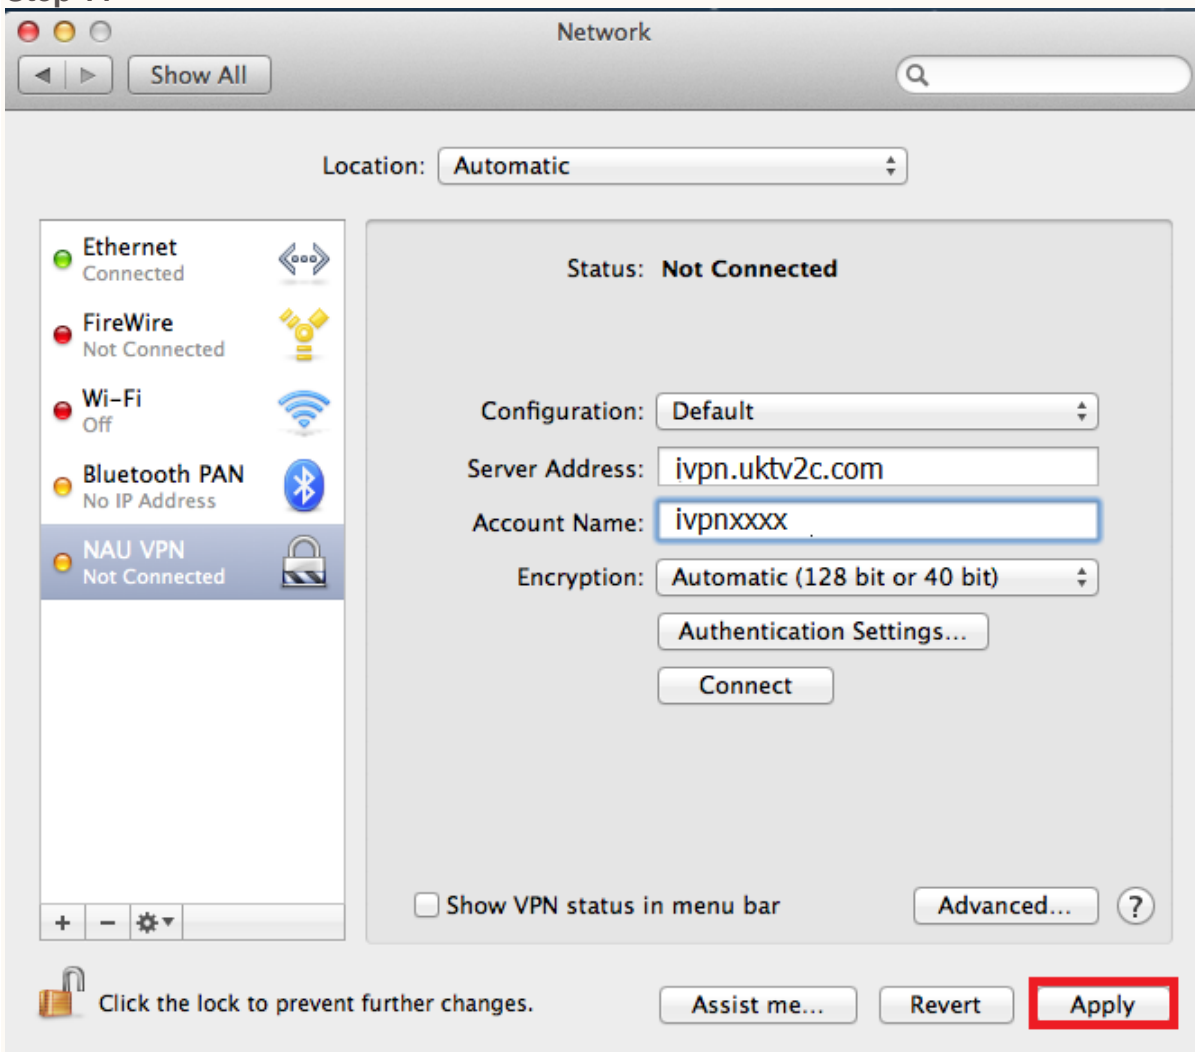

Figure: Apply VPN Settings

Click "Apply."

Step 12

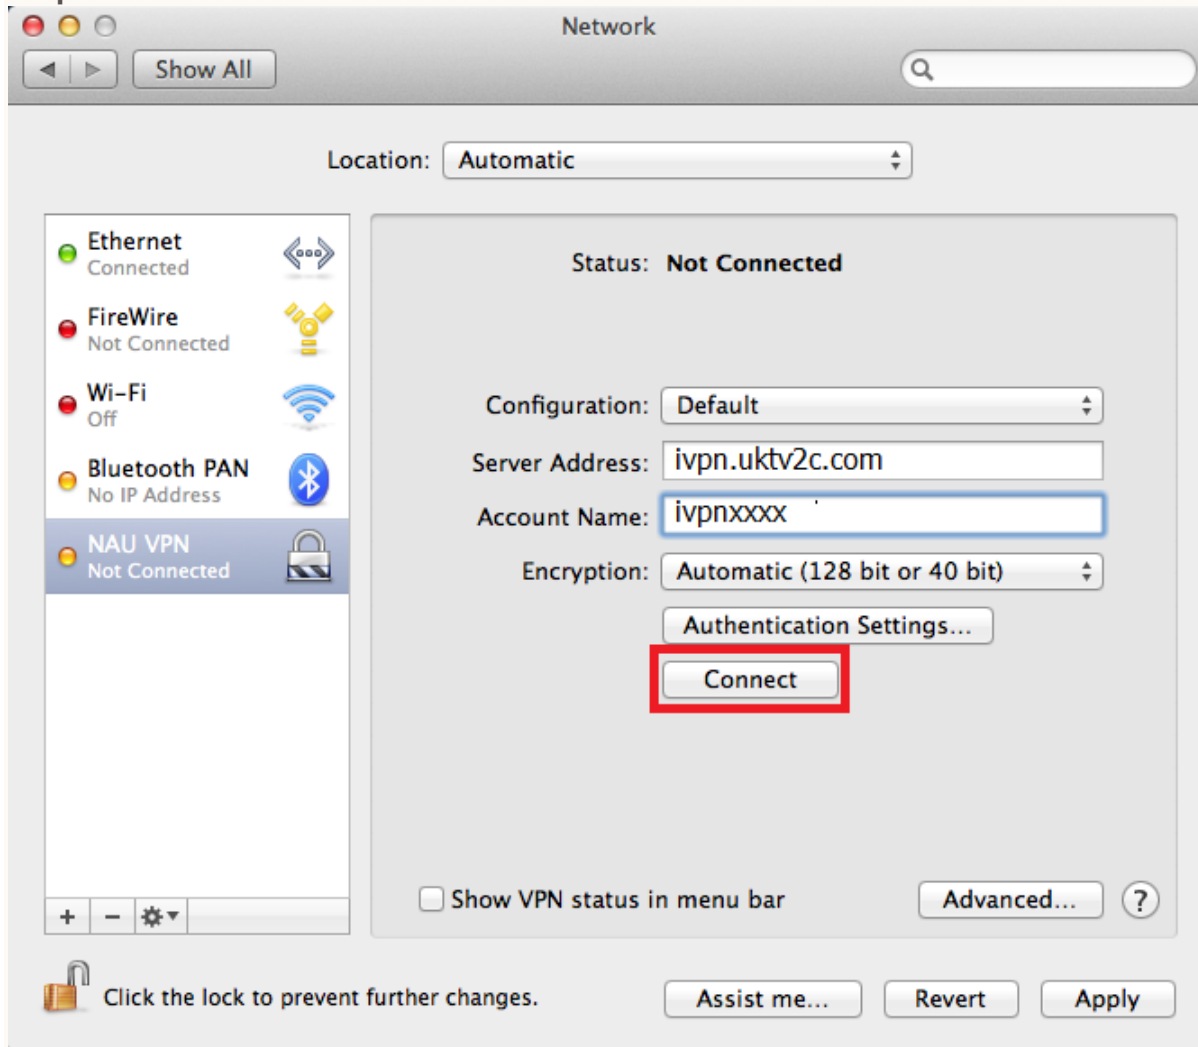

Figure: Connect to VPN

Click "Connect" to connect to the uktv2c ivpn.
